

Enterprise Mobile Migration with AT&T

AMI Strategies Case Example

SITUATION

A global leader in water, hygiene and energy technologies and services was searching for a new mobile carrier that could help it meet the following challenges:

A high-travel workforce that required global mobile access and flexibility

A solution that could track and manage data and minute pools

A predictable spend model that could offer cost controls

A complete change in mobile policies that would pass the cost of the device on to the employee while maintaining the corporate service plan for a **estimated cost savings of \$600,000.**

TOGGLING ON A NEW CARRIER

This client selected AT&T as its new carrier of choice. As such, AT&T was tasked with upgrading, activating/deactivating and trouble shooting thousands of employees within a very short timeframe - **just two months.**

This could have been a very time consuming, resource draining and human-error-prone process for AT&T, but they had a game-changer in their corner - **AMI Strategies' mobility management services.**
